

mAuthor main features

ACCESSIBILITY & WCAG 2.1 COMPLIANCE

Digital, modern and accessible to everyone – that’s what we care about in eContent. Our native assistive technologies will support the process of converting your already existing or just-created eContent into compliant WCAG 2.1. And that's not all! Your users can use extended support in reading, listening or easy navigating through modules.

Make all students members of the digital world.

WHAT KIND OF eCONTENT YOU CAN CREATE USING THIS FEATURE IN mAUTHOR?

1 IMPLEMENT LISTENING TO DESCRIPTIONS OR THE OPTION TO READ SUBTITLES

You can add:

- **audio descriptions** to videos to support the visually impaired and blind users. This feature does not require editing the ready video files,
- **subtitles to videos** and slideshows to make the content accessible to students with hearing disabilities,
- **text alternatives** for all graphic elements.

[See how it works →](#)

2 ADD THE NAVIGATION WITH THE KEYBOARD ONLY

Users can navigate through the course, solve even the most complex activities and check the results **using the keyboard only**. There is no need for mouse or touchscreen gestures.

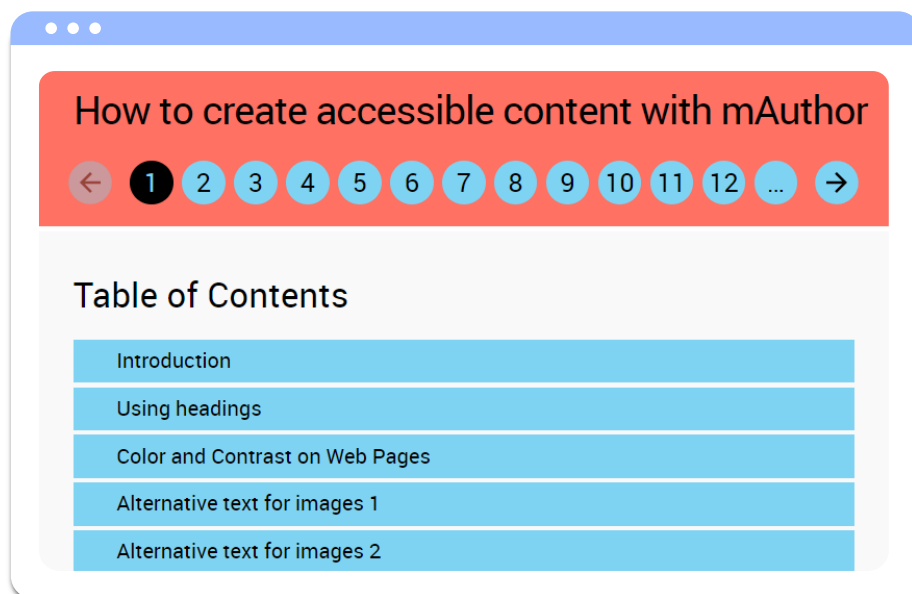

3 INTRODUCE SCREEN READING SUPPORT

Use a **voice synthesis** of alternative texts applied to the visual elements as well as **multi-language** and **mathematical formula support**. Our new **screen reading assistive** technology is integrated with all the created content.

HOW TO CREATE ACCESSIBLE CONTENT WITH mAUTHOR?

Learn in detail how new features help content developers create truly accessible and interactive educational content.
